

10GIGE/OC192 WAN/LAN Conversions

Concatenated or Channelized OC192/STM-64 POS or TDM

OptiCop accesses concatenated (POS) or channelized (TDM voice or data) OC192/STM-64 and forwards the POS IP traffic to a 10GIGE IP Probe. OptiCop 10G may also extract the lower speed tributary TDM voice or data packets, format the traffic into Gigabit Ethernet and forward it to GIGE processing equipment.
