

Optical Matrix Switch with Test Access

max Size:
64X64 OC3S
16X16 OC12S
4X4 OC48S

OptiCop modules are combined into scalable symmetrical and asymmetrical non-blocking matrix switches. Optical parts may be configured with or without APS switching. Eight ports offer test access to OC12, OC3, T-carrier and PDH network traffic. Selected traffic streams/protocol sessions may be filtered out and routed to test port outputs or to GIGE outputs.
